

# GXA-750/GXA-1600

## PROFESSIONAL STEREO AMPLIFIERS

Both the GXA-750 & 1600 are powerful amplifiers that will ensure solid sound stability with a constant performance. These amplifiers will operate at 8, 4 & 2 ohms with mono or bridge modes, enabling a user to utilize each in a variety of ways with different sound systems. The monitoring systems use various LEDs for proper indication of distortion and different operating modes. We have also included balanced inputs & outputs for improved connectivity, resulting in a very useful solution for most DJs.

### FEATURES:

- State of the art technology provides exceptional reliability when working with difficult speakers
- Stable down to 2 ohm impedance
- Excellent handling of low frequencies as well as clear mids and flawless highs
- High output power to drive professional loudspeakers without distortion
- Oversized toroidal transformer, filter and heatsinks for better low end, transparency and stability
- Comprehensive protection circuitry (short, overheat, DC, subsonic & RF filters, turn-on delay) with high current speaker protection relays
- Three modes of operation - stereo, parallel mono and mono bridge with mode status indication LED on front panel
- Flexible input configuration with active balanced inputs; additional input connectors to chain amps
- True clip LED for better control
- Front-to-Rear airflow with 2 speed dual fan control
- Efficient dual aluminum extrusion heatsink design for thermal stability & reliability
- Turn-on in-rush current limiting circuitry
- Compact 2U well balanced enclosure
- Steel reinforced chassis construction for durability and longevity
- Backed by an extended five year warranty
